UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant:

VITERI, Fermin et al.

Serial No.:

10/616,480

Filed:

July 8, 2003

For:

Hydrocarbon Combustion Power

Generation System with CO2

Sequestration

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

INFORMATION DISCLOSURE STATEMENT

In accordance with the requirements of 37 C.F.R. §§1.97 and 1.98, the undersigned requests that the information contained herein be considered by the Office.

REMARKS

The information to be considered includes: a form PTO-1449 listing references and a copy of the listed references, in accordance with 37 C.F.R. §1.98.

The following statements are provided identifying the relevance, as understood by the undersigned, of the references included herein which are provided in a language other than English. No translations are available for these references. If additional information is deemed necessary by the Office, please contact the undersigned.

French Patent No. 350,612 to Braun appears to teach a combustor which combusts a hydrocarbon fuel (page 2, column 6 and 7) in the presence of air and vaporized water (page 1, column 31). The combustor appears to be located upstream of a turbine. The

technology taught by Braun is distinct from the technology at issue in this case in that the oxidizer is in the form of air rather than oxygen, among other significant differences.

German Patent No. 1,301,821 to Fabian appears to teach a rocket engine which combusts a fuel such as an alcohol and also delivers water into the combustion chamber of the rocket engine. This reference is distinct from the technology which is the subject of the present application in that it is a combustor for a thrust engine rather than coupled to a turbine for power generation, among other significant differences.

German Patent No. 2,933,932 to Sternfeld et al. appears to teach a combustor for oxygen and hydrogen which also introduces water into the combustor (see figure 6). This reference is distinct from the technology of the present application in that no carbon is included in the hydrogen so that no carbon dioxide is formed requiring separation, among other significant differences.

German Patent No. 3,122,338 to Rohatscheck et al. appears to teach a fuel combustor which includes water introduced into the combustion chamber.

European Patent No. 197,555 to Ramsaier et al. appears to teach a combustor for a mixture of hydrogen and oxygen which includes water directed into the combustor.

Published German Application No. 3,512,947 has the same disclosure as European Patent No. 197,555.

European Published Application No. 413,199 to Siemens appears to teach a gas synthesis system which includes various different constituents inputted into the system some of which are combusted or otherwise reacted to produce other constituents which in some ways relate to the chemical reactions taking place in the technology of the present application.

None of these references appear to teach, either alone or in any conceivable combination, the requirements of the invention of this application as claimed.

This document is filed before a first Office action on the merits of this case, and hence should be considered as timely filed. Should the examiner have any questions upon his review of the above information, the undersigned requests that the examiner contact the undersigned by phone.

Respectfully Submitted:

Bradley P. Heisler Applicants' Attorney Telephone (916) 781-6634 Registration No.: 35,892
